

Hosting Services for Infor Cloudsuite

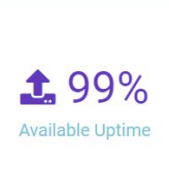

Infor Cloudsuite Public Sector is a single-tenant solution that contains multiple products, including base products and high-value applications that are specifically targeted to public sector organizations. All of these applications are delivered in the Amazon Cloud. This cloud-deployed suite is a robust set of products that automates traditional financial operations, manages basic human resources functions, and manages procurement processes with suppliers. The solution also provides business intelligence and analytics products to maximize the value of your company.
