

Custom Solutions

Having our initial start in the public sector industry, JK Seva has extensive experience in implementing both packaged and custom solutions for various agencies. Our integrated solution using the Infor ERP and UKG Workforce Management Timekeeper and TeleStaff systems provide a commercial off-the-shelf (COTS) approach with deep HCM management, financial accounting applications, and workflow capabilities. Packaged software - that is configurable – allows the client to have a system that supports future automation and self-service without dependence on vendors or consultants.

There are a number of ERP solutions available and it can be difficult to find a “One Fits All” solution. Our experience has also shown that our customer may not be aware of risks and issues until an upgrade or a full implementation provides the time and resources to conduct business processing analyses.

We feel that JK Seva is uniquely qualified to provide a total solution of software and implementation services that will be required for you to have a successful deployment. Our team of implementation specialists are seasoned professionals who average over 16 years of ERP implementation experience and have the related business acumen necessary to support public sector agencies.

We offer hybrid solutions using the “best of breed” software along with structured implementation services. We understand the goal of many companies is to automate business processes while improving the data accuracy and user access. With Infor and UKG having a deep public sector customer base, they are committed to providing software solutions that accommodate the special requirements of accounting and HCM.
